## EXPERIENCE

**2019 - Present**

### Vanly | Co-founder & CTO

- A two-sided marketplace for homeowners to Share Driveway Space™ with vanlifers
- Top performing SEO PWA website, cross-platform mobile app, ML prediction service, suite of admin tools

**April 2019 - April 2021**

### Triplebyte | Full-stack Engineer

- Project lead for the most vital company capstone projects: jobs directory, Triplebyte Screen, profile editor
- Added sub 30ms React server-side-rendering system in Rails
- Moved all web infrastructure and test suites to parallized Docker containers for a tremendous increase in speed, caching and reliability

**2018 - 2019**

### Rootid | Dev-ops Intern

- Moved to Docker infrastructure and created automated integration testing suite for >20 client websites

**2017 - 2018**

### Baskin School of Engineering | Full-stack Engineer

- Created automated tools for bulk content migration and testing that are still used today to manage hundreds of enterprise Drupal sites
- Built reusable web "modules", interactive building maps and company org charts, used on campus kiosks
- Developed responsive Drupal CSS theme used on most School of Engineering websites
